## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1 and 16 are allowed.

The following is an examiner's statement of reasons for allowance:

None of the prior art, either singularly or in combination, fairly teaches or suggests applicant's claimed invention wherein applicant recites "wherein a second dimension of S1" in the direction Y differs from a corresponding second dimension of S1 in the direction Y by a second amount that is a second function of the corresponding second dimension of S1 in the direction Y, a third dimension of S1 in the direction X, and a distance from S1 to a second neighbor of S1, said second neighbor of S1 being a geometric shape comprised by the geometrical shapes S.

US PAP 2003/ 0013213 teaches an exposure system includes a wafer processing apparatus for performing a preparation-for-exposure process on a wafer before an exposure process is performed, an exposure apparatus for performing the exposure process on the wafer subjected to the preparation-for-exposure process performed by the wafer processing apparatus, wherein the exposure apparatus also performs a calibration process to correct an error caused by a time-varying environmental parameter and/or caused by the exposure apparatus itself, and a host computer connected to the wafer processing apparatus and the exposure apparatus via communication means. Depending on the time needed for the wafer processing apparatus to perform the preparation-for-exposure process, the host computer

outputs a calibration execution command for performing the calibration process to the exposure apparatus. Thereby, the total time from the start of processing a lot to the end thereof is minimized and thus, the total throughput is improved.

US PAP 2002/ 0018207 teaches in an alignment method, in order to expose a pattern of a first object onto a second object, a plurality of marks on the second object are detected with a mark detection unit, and the first and second objects are aligned with each other. Before this process, the shape of a mark on the second object is measured, thereby obtaining an offset that should be reflected in a detection result of the mark detection unit. The shape of the mark is measured with a shape measurement unit (63) with no possibility of coming into contact with the mark, through calibration with reference to a shape measurement unit (64) with a possibility of coming into contact with the mark. The shape of the mark can be measured without contaminating or damaging the mark.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
